US 2003-496738P P 20030821

The invention discloses the use of a compound which is a serotonin reuptake inhibitor and a compound, which is a GlyT-1 inhibitor for the preparation of a pharmaceutical composition for the treatment of depression, anxiety disorders, and other affective disorders. In particular the invention relates to treatment of depression, anxiety disorders , and other affective disorders, e.g. generalized anxiety disorder, panic anxiety, obsessive compulsive disorder, acute stress disorder, post traumatic stress disorder and social anxiety disorder, eating disorders such as bulimia, anorexia and obesity, phobias, dysthymia, premenstrual syndrome, cognitive disorders, impulse control disorders, attention deficit hyperactivity disorder, drug abuse or any other disorder responsive to serotonin reuptake inhibitors. The invention also discloses a pharmaceutical composition comprising a serotonin reuptake inhibitor and a GlyT-1 inhibitor.

			US 2004-762263	A2 20040123

The present invention is a method of non-continuous administration of a AΒ pharmaceutical to a female for a condition associated with the female's menstrual cycle, comprising ascertaining a number of days in the female's menstrual cycle, and then administering a daily first dosage, starting on the first or the second day of the menstrual cycle and continuing the daily administration for a first dosage period. Next administering a daily second dosage, starting on the day after the last daily first dosage was administered and continuing the daily administration of the second dosage for a second dosage period. Either the first dosage is a placebo and the second dosage is the pharmaceutical, or the first dosage is the pharmaceutical and the second dosage is a placebo. Both the first dosages and the second dosages being contained in a single package. A package contains placebos and a selective serotonin reuptake inhibitor such as fluoxetine.

AΒ This invention is directed to pharmaceutical compns. and methods for treating a disorder or condition selected from the group consisting of depression, anxiety disorders, phobias, avoidant personality disorder, eating disorders, chemical dependencies, Parkinson's diseases, obsessive-compulsive disorder, neg. symptoms of schizophrenia, cognitive dysfunction related to schizophrenia, premenstrual syndrome, stress-induced incontinence, headache, neuropathic pain, chronic pain, urinary incontinence, post-traumatic stress disorder, chronic stress, acute stress, fibromyalqia, depression comorbid with fibromyalqia, obesity, migraine and a combination thereof in a mammal. The methods in one embodiment comprise administering to a mammal in need of treatment for the disorder or condition: (i) at least one serotonin reuptake inhibitor or pharmaceutically acceptable salt thereof; (ii) at least one norepinephrine reuptake inhibitor or pharmaceutically acceptable salt thereof, wherein the norepinephrine reuptake inhibitor is selected from the group consisting of Structure (I), Structure (II), and Structure (III) as defined in the specification; and (iii) a pharmaceutically acceptable carrier. The pharmaceutical compns, and methods of the invention are also useful for preventing a relapse associated with one of the foregoing disorders or conditions, and for treating a symptom associated with one of the foregoing disorders or conditions, wherein the symptom is selected from the group consisting of cognitive dysfunctions and somatic complaints.

AΒ
     The present invention relates to use of gaboxadol for preparing a
     pharmaceutical composition for treating depression. Moreover, it relates to
     the use of gaboxadol for the preparation of a pharmaceutical composition to be used
     in combination with a serotonin reuptake inhibitor or any other compound,
     which causes an elevation in the level of extracellular serotonin.

MARPAT 140:400095 OTHER SOURCE(S):

The invention relates generally to the enantiomers of p-hydroxymilnacipran or congeners thereof. Biol. assays revealed that racemic p-hydroxymilnacipran is approx. equipotent in inhibiting serotonin and norepinephrine uptake (IC50 = 28.6 nM for norepinephrine, IC50 = 21.7 nM for serotonin). Interestingly, (+)-p-hydroxymilnacipran is a more potent inhibitor of norepinephrine uptake than serotonin uptake (IC50 = 10.3 nM for norepinephrine, IC50 = 22 nM for serotonin). In contrast, (-)-p-hydroxymilnacipran is a more potent inhibitor of serotonin uptake compared to norepinephrine uptake (IC50 = 88.5 nM for norepinephrine, IC50 = 40.3 nM for serotonin). The invention also relates to salts and prodrug forms of the above compds. In certain embodiments, the compds. of the invention and a pharmaceutically acceptable excipient are combined to prepare a formulation for administration to a patient. Finally, the invention relates to methods of treating mammals suffering from various afflictions, e.g., depression, chronic pain, or fibromyalgia, comprising administering to a mammal in need thereof a therapeutically effective amount of a compound of the invention. Compound preparation is included.

AB Method is disclosed for the treatment of neurol. and/or mental disorders that are associated with, or pathogenetically related to deficient serotonin neurotransmission. More particularly the invention relates to a method of treating depressive disorders, anxiety disorders, post-traumatic stress syndrome or premenstrual syndrome, said method comprising the administration of serotonin re-uptake inhibitor (SRI) in a daily amount of at least 0.4 mg, wherein a vitamin B6 component is co-administered in a daily amount of between 0.01 and 10 mmoles to improve the responder rate or to advance the onset of action of the treatment with SRI, and wherein the method does not include the application to the brain of an AC pulsed magnetic field of at least 7.5 picotesia flux d. for at least 15 min. The invention also encompasses pharmaceutical formulations containing SRI and vitamin B6 component and comprising a dosage unit that provides a sustained release of the vitamin B6 component.

AΒ The invention discloses the use of enantiomerically pure escitalopram and/or low-dose medicaments thereof for the improved treatment of depression, in particular major depression disorder, neurotic disorders, acute stress disorder, eating disorders such as bulimia, anorexia and obesity, phobias, dysthymia, pre-menstrual syndrome, cognitive disorders, impulse control disorders, attention deficit hyperactivity disorder or drug abuse. The medicaments may also be used in the treatment of major depression disorder in "treatmentresistant" patients.

     The invention discloses the use of a combination of irindalone and a
AB
     serotonin reuptake inhibitor, or any other compound which causes an
     elevation in the level of extracellular serotonin, for the treatment of
     depression and other affective disorders.

The invention discloses the use of a compound which is a serotonin reuptake inhibitor and a compound, which is a GlyT-1 inhibitor for the preparation of a pharmaceutical composition for the treatment of depression, anxiety disorders, and other affective disorders. In particular the invention relates to treatment of depression, anxiety disorders , and other affective disorders, e.g. generalized anxiety disorder, panic anxiety, obsessive compulsive disorder, acute stress disorder, post traumatic stress disorder and social anxiety disorder, eating disorders such as bulimia, anorexia and obesity, phobias, dysthymia, premenstrual syndrome, cognitive disorders, impulse control disorders, attention deficit

hyperactivity disorder, drug abuse or any other disorder responsive to serotonin reuptake inhibitors. The invention also discloses a pharmaceutical composition comprising a serotonin reuptake inhibitor and a GlyT-1 inhibitor.

     The present invention relates to use of gaboxadol for preparing a
AΒ
     pharmaceutical composition for treating depression. Moreover, it relates to
     the use of gaboxadol for the preparation of a pharmaceutical composition to be used
     in combination with a serotonin reuptake inhibitor or any other compound,
     which causes an elevation in the level of extracellular serotonin.

OTHER SOURCE(S): MARPAT 140:400095 The invention relates generally to the enantiomers of p-hydroxymilnacipran or congeners thereof. Biol. assays revealed that racemic p-hydroxymilnacipran is approx. equipotent in inhibiting serotonin and norepinephrine uptake (IC50 = 28.6 nM for norepinephrine, IC50 = 21.7 nM for serotonin). Interestingly, (+)-p-hydroxymilnacipran is a more potent inhibitor of norepinephrine uptake than serotonin uptake (IC50 = 10.3 nM for norepinephrine, IC50 = 22 nM for serotonin). In contrast, (-)-p-hydroxymilnacipran is a more potent inhibitor of serotonin uptake compared to norepinephrine uptake (IC50 = 88.5 nM for norepinephrine, IC50 = 40.3 nM for serotonin). The invention also relates to salts and prodrug forms of the above compds. In certain embodiments, the compds. of the invention and a pharmaceutically acceptable excipient are combined to prepare a formulation for administration to a patient. Finally, the invention relates to methods of treating mammals suffering from various afflictions, e.g., depression, chronic pain, or fibromyalgia, comprising administering to a mammal in need thereof a therapeutically effective amount of a compound of the invention. Compound preparation is included.

DOCUMENT TYPE: Article LANGUAGE: English Entered STN: 14 Apr 2004 ENTRY DATE: Last Updated on STN: 14 Apr 2004 This month's Annual Update 2003, dedicated to Drugs for Psychiatric AΒ Disorders and Substance Abuse, is comprised of a compendium of 137 drugs for the treatment of anxiety disorders, depression, bipolar disorder, schizophrenia, autism, attention deficit hyperactivity disorder, sleep disorders, alcohol abuse and alcoholism, drug abuse and addiction, and smoking cessation. The table of drugs includes products which have been launched for the first time since 2002 and others that were previously marketed for another indication.

Products featured in the monograph updates section include agomelatine,

aripiprazole, blonanserin, duloxetine hyrochloride, escitalopram

oxalate, eszopiclone, gepirone hydrochloride, indiplon, INN-00835, lamotrigine, nalmefene, naltrexone hydrochloride, ocinaplon, olanzapine, pregabalin, quetiapine fumarate, TAK-375 and venlafaxine hydrochloride.

The invention discloses the use of enantiomerically pure escitalopram and/or low-dose medicaments thereof for the improved treatment of depression, in particular major depression disorder, neurotic disorders, acute stress disorder, eating disorders such as bulimia, anorexia and obesity, phobias, dysthymia, pre-menstrual syndrome, cognitive disorders, impulse control disorders, attention deficit hyperactivity disorder or drug abuse. The medicaments may also be used in the treatment of major depression disorder in "treatment-resistant" patients.
